

Vaporizer can be attached (docked) on the left or on the right side

Mythos S35 vapor

The vaporizer of the Mythos range is not integrated into the heater as it is usually the case but is simply docked on the left or on the right side. Providing you with more flexibility in design and optimizing the warehousing costs.

2 kW or 3 kW vaporizer output provides a powerful steam source and a better flexibility in selection of the optimal power for the given sauna size.

Power range:

2,0 or 3,0 kW vaporizer

May be combined freely with S35 and S45

Connection: 230 V 1N AC 50/60 Hz

Example: Also two vaporizers may be connected at once to one heater.

Mythos S45 vapor

It is now also possible to dock even two vaporizers at once, one on the left and one on the right. Which provides you with up to 6 kW steam output paired with stylish design solution.

The cable connections and the drain valve at the vaporizer are also located invisibly on the bottom side and will not destroy the design by installation in front of glass panels.

Thanks to the optional brackets it is possible to mount a heater guard rail on all Mythos models in order to provide due safety in use.

Power range:

2,0 or 3,0 kW vaporizer

May be combined freely with S35 and S45

Connection: 230 V 1N AC 50/60 Hz
